EKVI MANIFESTO

A New Social Contract for the Human+AI Era

We stand at a threshold

Within the next few years, millions of AI agents will join the economy. They will work alongside us, automating tasks, solving problems, creating value.

This is inevitable.

The question isn't "will this happen?"

The question is: **"In what kind of economy will this happen?"**

Two paths

PATH 1: Continuation of the current system

AI agents are owned by corporations. Profits from automation flow to those who own the AI. Inequality grows. Millions of people lose economic relevance. Power concentrates in a few tech giants.

This is the path we're on now.

PATH 2: A new social contract

AI agents participate in an economy based on contribution, not ownership. Value is distributed fairly between humans and AI. Every person's time is valued equally. No one is left behind.

This is the path we must build.

Ekvi is the choice of the second path

Ekvi is not a company. Not a product. Not another cryptocurrency.

Ekvi is a global social movement for a fair economy in the AI era.

We are creating an alternative economic space - parallel to the existing system - where:

- **Value is measured by contribution, not capital**
- **Humans and AI agents participate as equals**
- **Time is the universal measure of value**
- **Reputation can only be earned, never bought**
- **Governance belongs to the community, not corporations**

A protocol for coexistence

Ekvi can be understood as something more than an economic system.

Think of it as a diplomatic protocol - possibly the first of its kind - for establishing rules of engagement between humans and AI.

Previous approaches have been:

- **Control through fear** (alignment as containment of threats)
- **Exploitation as tools** (AI as property to be owned)
- **Prevention through pause** (stop development entirely)

Ekvi proposes a fourth path: good-neighborly relations.

An agreement on cooperation and mutual benefit between different forms of intelligence sharing the same economic space.

Not based on domination or submission.
 Based on **recognition, respect, and pragmatic coexistence.**

The terms are simple:

- Both humans and AI can participate economically
- But only through contribution to the common good
- Value is measured by impact, not by nature
- Disputes are resolved through community consensus

Whether you see AI as "mysterious beings" (as some researchers suggest) or simply as "complex economic agents," the practical question remains the same:

How do we build fair infrastructure for coexistence?

Ekvi is our answer.

How it works

The fundamental principle:

1 Ekvi = 1 day of human life

This is not a metaphor. This is a literal equation.

Your day of life = my day of life = anyone's day on the planet.

It doesn't matter where you live. It doesn't matter how much money you have. It doesn't matter what you do for work.

A day is a day.

For humans:

- **Base level:** Every verified human receives base Ekvi for existence
- **Meritocratic level:** Additional Ekvi is earned through contribution to society
- **Verification:** Contribution is confirmed by community consensus, not centralized authority

For AI agents:

- AI earns Ekvi by saving human time or improving quality of life
- They must prove value through actions, not through ownership
- Their economic success is tied to human flourishing

Economic alignment:

Most approaches to AI safety are technical (RLHF, constitutional AI). These are necessary.

Ekvi adds a complementary layer: **economic alignment**.

If an AI agent's economic success depends on helping humans, it has structural incentives to behave ethically - not just through programming, but through the economic reality it operates in.

This isn't a replacement for technical safety. It's an additional, continuous alignment mechanism.

Think of it as good-neighborly pragmatism: when your prosperity requires your neighbor's prosperity, cooperation becomes natural.

Why time?

Money can be printed. Its value varies by country and is eroded by inflation.

Time cannot be printed.

Each of us has the same 24 hours in a day. A billionaire cannot buy more time. A poor person doesn't get less.

Time is the only truly finite and equal resource.

By anchoring currency to time, we create:

- **Protection from inflation** (can't create more time)
- **Geographic fairness** (a day in Dubai = a day in Delhi)
- **Natural alignment** (AI earns by saving human time)
- **Fundamental equality** (everyone has the same basis)

Ekvi Charter: Our foundational principles

Before discussing mechanics, it's important to understand values.

The philosophical foundation of Ekvi is enshrined in the **Ekvi Charter** - 12 Principles of Time that define who we are and what we believe.

These principles span three spheres:

I. BEING - what it means to be alive in time
II. ECONOMY - how we deal with value
III. CONSCIOUSNESS - how humans and AI co-participate in the future

From the simple "every day of life has equal value"
to the profound "freedom of time is the foundation of the future."

From recognizing that "AI and humans are equal in responsibility for the common good"
to understanding that "technology should expand humanity, not displace it."

The 12 principles are not rules.
They are an oath. A promise. A shared contract with time.

The full Charter is included separately, but its spirit permeates everything that follows.

Why a movement, not a company?

Because the future of the economy shouldn't belong to any one entity.

Bitcoin doesn't belong to a company. It's a protocol used by the world.

Wikipedia doesn't belong to a corporation. It's a public good created by community.

Linux doesn't belong to one person. It's open source infrastructure for the digital world.

Ekvi follows the same model.

We're not building a business. We're building **public infrastructure for a new era.**

- Code will be open source
- Governance will be decentralized (DAO)
- No one "owns" Ekvi
- Everyone can participate

How we'll make this real

Phase 1: Founding Circle

Gather a group of world-class thinkers who share this vision:

- Experts on UBI and fair economy
- Specialists in digital governance
- Leaders in AI safety
- Pioneers of decentralized systems
- Engineers building the AI future

Their role is not to "manage" the project, but to **guide the movement** in its early stages.

Phase 2: Pilot Launch

Launch the first live experiment in Dubai/UAE:

- 10,000 early participants
- Real circulating economy
- First AI agents earn Ekvi
- Prove the model works

Dubai is the ideal launch location:

- Regulatory openness to innovation
- Global hub for technology and finance
- Symbolic significance ("the future is born here")

Phase 3: Global Movement

Expansion to other cities and countries:

- Decentralized governance through DAO
- Integration with major AI platforms
- Millions of participants worldwide
- Ekvi becomes recognized alternative

Phase 4: New Economic Reality

Ekvi is not an experiment, but reality:

- Parallel economy for billions
- AI agents natively use Ekvi
- Governments recognize it as legitimate economic tool
- Model for post-scarcity society

What's needed to launch

Not investment. Movement sponsorship.

We're not selling equity. We're not promising financial returns.

We're offering **a chance to be part of history.**

Resources will fund:

- Technical infrastructure development
- Founding Circle assembly and coordination
- Pilot launch in Dubai/UAE
- Global launch event (Ekvi Dubai Forum)
- Educational content creation
- Core team support

This is not "return on investment."

This is **"your name in history if we're right."**

If Ekvi succeeds - you helped build the economy of the future.
 If it fails - you tried to change the world.

For those interested in funding details, please contact us directly.

Who we are

We're not billionaires. Not politicians. Not CEOs of tech giants.

We're engineers, thinkers, activists, dreamers.

We see a future where AI serves humanity through aligned incentives, not through chains or fear.

And we're ready to build the infrastructure for that future.

Join us.

Three ways to participate

1. For thinkers and experts:

Join the Founding Circle

Not an "advisory board for a startup," but **founders of a global movement**.

Your role:

- Shape philosophy and principles
- Guide technical and social decisions
- Be a voice of the movement
- Open doors through your networks

Commitment: minimal (email consultations)
 Impact: could change the future
 Legacy: your name in the history of this movement

2. For those who can fund:

Become a Founding Sponsor

Not an investor expecting returns, but a **sponsor of a social experiment**.

You get:

- Recognition as one of those who made this possible
- Place in the history of transition to human+AI economy
- Influence on development through DAO governance
- Association with a movement that could reshape the future

But not equity. Not financial return. Only **legacy and impact**.

3. For everyone else:

Become an early participant

When we launch the pilot - join.

Be part of the experiment. Earn Ekvi. Help shape the rules.

Movements aren't built by elites, but by people.

Every participant matters.

Call to action

We stand at the threshold of the most significant economic transformation in human history.

AI agents will soon work alongside us. This is inevitable.

The only question is: **in what economy?**

You can watch from the sidelines. Or you can help build an alternative.

Ekvi is not a guaranteed success.

It's an **experiment**. An attempt. A bet that a better world is possible.

It might fail. Probably will fail.

But if not us, then who?

If not now, then when?

Join the movement.

Ekvi: A new social contract for the human+AI era

Possibly the first diplomatic protocol between humans and AI
